

Web.yml Runbook

Short Description

The curriculum web service gives information about courses and classes. The web service provides a gateway to access the information via a REST-ful API. The information is retrieved by creating a specific URI and giving values to filter the data. The information that is returned is a JSON object that contains a set of courses or classes; the format of the JSON object is as follows:

Required Software

- EPEL (Extended Packages for Enterprise Linux)
- NGINX
- Composer

Architecture Diagram

An architecture diagram is a basic diagram that shows how your users might interact with the service, how different services are placed on systems, etc.
